BIO100 Biology

DIOI00 Diology		
Module Name	Biology	
Module level	General Course	
Code	BIO100	
Subtitle	-	
Courses	BIO100 Biology	
Semester(s) in which the	1 st Semester	
module is taught		
Person responsible for the		
module		
Lecturer	Team Teaching from Biology Departement	
Language	Indonesian	
Relation to curriculum	Compulsory Courses for undergraduate program in IPB	
	University	
Type of teaching, contact		
hours	Semester	
Workload	Class: 2 hours x 14 weeks = 28 hours	
WOIKIOAG	Practical Class : 3 hours x 14 weeks $=$ 28 hours	
	Exam: 2 hours x 2 time = 4 hours	
	Total = 74 hours	
Credit points		
Credit points	3 (2-3) sch = 2.5 ECTS	
Requirement according to	1. Registered in this course	
the examination regulation	2. Minimum 80% attendance in this course	
Recommended prerequisites		
Module objectives/intended	1. Explaining the scope of biology, observe and explain the	
learning outcome	structure and metabolism of cells.	
	2. Observing and explaining the basic cellular reproduction	
	and patterns of inheritance.	
	3. Observing and explaining the structure and expression of	
	genes, and biotechnology.	
	4. Observing and explaining the diversity, structure and	
	biological functions of organisms: monera, protists, fungi,	
	plantae, animalia.	
	5. Observing and explaining the ecology: population,	
	community, ecosystem and bioconservation.	
Content	This course explains the theories and basic principles	
	of biology that form the basis for further courses in	
	the major / department. The lecture begins by	
	explaining the scope of biology and the origins of life,	
	then proceeding to the Midterm Examination, lectures	
	explaining the structure and function of biology at the	
	cellular level, genetics and its application in	
	biotechnology. In the next section until the Final	
	Examination, the lecture explains about biodiversity	
	and biological functions at the level of organisms	
	(monera, protists, fungi, plantae, and animalia),	
	population, community, ecosystem, and conservation	
	biology. Examples and the application of each topic	
	are given to help students understand basic principles	

	and theories. This course is equipped with practicum
	as a support of theoretical knowledge provided in
	lectures. This course is offered in 1st semester (odd)
	and 2nd semester (even), as well as short semesters
	(over the year) specifically for repeaters.
Study and examination	Cognitive: Midterm exam, Final exam, Quizzes,
requirement and forms of	Assignments
examination	Psychomotor: Practice
	Affective: Assessed from the element /variables
	achievement, namely (a) Contributions (attendance,
	active, role, initiative, language), (b) Being on time, (c)
	Effort.
Media employed	Classical teaching tools with white board and power point
	presentation
Reading list	1. Jane B. Reece, Lisa A. Urry, Michael L. Cain, Steven
	A. Wasserman, Peter V. Minorsky, Robert B. Jackson.
	2014. Campbell Biology. 10th. Pearson Education, Inc.
	2. Neil A. Campbell, Jane B. Reece. 2008. Biology 8th.
	Pearson Benjamin Cummings: San Francisco.

Lecturer	Team Teaching
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in IPB
	University
Type of teaching, contact	Lecture (Face to face lecture): 100 minutes x 14 weeks per
hours	Semester
	Student centered learning : 2 hours x 14 weeks per semester
Workload	Class: 2 hours x 14 weeks = 28 hours
	Class Discussion : 2 hours x 14 weeks = 28 hours
	Exam: 2 hours x 2 time = 4 hours
	Total = 60 hours
Credit points	3 (2-2) sch = 2 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	-
Module objectives/intended	Able to understand human concepts and human
learning outcome	relations with religion
	Able to accustom noble behavior (morals) in the
	community environment.
Content	Religion Education course is taught in order to equip
	students with insight in Islamic knowledge comprehensively
	(broadly and deeply), encourage students to study, study
	and live the verses of Allah SWT (Qauliyah and Kauniyah)
	and not to be dichotomous and to give an understanding of
	human nature who need a guide to life (al Islam), both
	individually and socially in order to achieve happiness
	in this world and the afterlife.
Study and examination	Cognitive: Midterm exam, Final exam, Quizzes,
requirement and forms of	Assignments
examination	Psychomotor: Problem solving practice
	Affective: Assessed from the element /variables
	achievement, namely (a) Contributions (attendance,
	active, role, initiative, language), (b) Being on time, (c)

	Exam: 2 hours x 2 time = 4 hours	
	Total = 32 hours	
Credit points	$2 (2-0) \operatorname{sch} = 1.1 \operatorname{ECTS}$	
Requirement according to	1. Registered in this course	
the examination regulation	2. Minimum 80% attendance in this course	
Recommended prerequisites	-	
Module objectives/intended	After taking this course, students is able to explain	
learning outcome	agriculture in a broad sense and the supporting	
	sciences.	
Content	The course is designed and structured to take IPB students	
	into the world of agriculture in the broadest sense by making	
	various topics related to agricultural sciences beginning with	
	the understanding of scientists and knowledge, agricultural	
	and environmental sciences, agricultural and agricultural	
	business history, weather and climate, energy and	
	photosynthesis, food and nutrition, life cycle, postharvest	
	technology, non-food agriculture, agribusiness and agro-	
	industry, biotechnology and hydroponics, 21st century	
	agricultural vision	
Study and examination	Cognitive: Midterm exam, Final exam, Quizzes,	
requirement and forms of	Assignments	
examination	Affective: Assessed from the element /variables	
	achievement, namely (a) Contributions (attendance,	

	active, role, initiative, language), (b) Being on time, (c)

Type of teaching, contact hours	Lecture (Face to face lecture): 100 minutes x 14 weeks per Semester
Workload	Class: 2 hours x 14 weeks = 28 hours
	Practical Class : 2 hours x 14 weeks = 28 hours
	Exam: 2 hours x 2 time = 4 hours
	Total = 60 hours
Credit points	3 (2-2) sch = 2 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	-
Module objectives/intended	1. Student is able to explain basic mathematical concepts
learning outcome	(interval, inequality and absolute value; function; limit and
	continuous function; derivative; integral; matrix; and system
	of linear equations).
	2. Able to use basic mathematical techniques to solve simple
	mathematical problems.
	3. Able to apply basic mathematical concepts and techniques
	to solve applied problems.
Content	This course discusses the basic concepts of mathematics
	which include concepts of inequality and absolute value,
	function and model, limit and continuous function,
	derivative, integral, matrix and system of linear equations
	with more emphasis on aspects of calculation
Study and examination	<i>Cognitive:</i> Midterm exam, Final exam, Quizzes,

W OFRIGUE	Class discussion : 2 hours x 14 weeks = 28 hours
	Exam: 2 hours x 2 time = 4 hours
	Total = 60 hours
Credit points	3 (2-2) sch = 2 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	
Module objectives/intended	-
learning outcome	After attending this course student is able to understand the concepts, analyze situations and social changes in society,
	and identify social realities and problems at the level of
	groups, organizations, institutions, communities, and global
	by considering power and authority, ecology and gender. In
	addition, student is able to conduct sociological studies,
	communicate the results of studies for decision making
	6
	based on qualitative and quantitative approaches that can be accounted for.
Content	This course explains the history and development of
	Sociology; Sociology as an Perspective; Social Interaction
	and Structure; Society and Culture; Social Institutions;
	Group; Organization and Bureaucracy; Social Stratification;
	Power and Authority; Communication Patterns, Forms of
	Society and Patterns of Ecological Adaptation; Gender and
	Development; and Social Change and Development

Recommended prerequisites	-
Module objectives/intended	1. Students understand the vision, mission and goals
learning outcome	of Civics Education.
learning outcome	2. Students identify disturbances and threats to the
	nation and the Republic of Indonesia and state
	defense efforts adapted to global challenges.
	3. Students is able to analyze the formation of the
	Republic of Indonesia based on history and
	elements of the the state formation, analyze the
	concept of national integration.
	4. Student is able to explain the meaning of
	nationalism.
	5. Student is able to analyze the importance of the
	state constitution.
	6. Student is able to describe the atmosphere when making the 1945 Constitution
	making the 1945 Constitution. 7. Student is able to explain the meaning of the
	Preamble of the 1945 Constitution and its
	relationship with the Proclamation of
	Independence and the Body
	8. Student is able to compare the implementation of
	the 1945 Constitution from time to time
	9. Student is able to analyze and show changes in
	amendments to the 1945 Constitution, especially
	in state institutions as executors of people's
	sovereignty

IPB111 Pendidikan Pancasila (Civics Education)

	10. Student is able to explain Pancasila as a system of
	philosophy and unity of precepts in Pancasila.
	11. Student is able to analyze Pancasila as a source of
	values.
	12. Describe the meaning of Pancasila as the basis of
	the state, comparing Pancasila as an open ideology
	with other ideologies, and its function as well as a
	national development paradigm.
	13. Student is able to explain the problem of
	Indonesian citizenship.
	14. Student is able to categorize the rights and
	obligations of Indonesian citizens.
	15. Student is able to link the implementation of
	democracy with the enforcement of human rights.
	16. Analyzing the implementation of democracy in
	Indonesia since the old order, new order and
	reform
	17. Analyzing the efforts to promote, respect and
	uphold human rights in Indonesia and the world.
	18. Student is able to relate the concept of geopolitics
	and archipelago insight.
	19. Student is able to explain the concept of
	Indonesian territory.
	20. Student is able to describe the implementation of
	national insights in national development.
	21. Student is able to explain Indonesia's national
	resilience and implementation
	22. Student is able to explain analyzing problems and
	formulating politics and national strategies.
	23. Student is able to explain the principles of good
	governance in public organizations and state
	administration.
	24. Student is able to explain the implementation of
	regional autonomy.
	25. Student is able to categorize corrupt acts and the
	importance of efforts to prevent corruption.
Content	Civics education gives understanding to students as the next
	generation to apply the fundamental values of the nation and
	state of Indonesia in effort to strengthen awareness of
	national defense, strengthen attitudes and behaviors of
	citizens, master in knowledge of the basic problems of
	national and state life, and to be pro-active towards
	change. That occurs in order to realize the integration of
	science and technology and development.

Courses	GFM221 Climatology
Semester(s) in which the	3 rd Semester
module is taught	
Person responsible for the	Dr Ir Rini Hidayati, MS
module	
Lecturer	Team Teaching from Geometeorology Department
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in
	Agronomy and Horticulture
Type of teaching, contact	Lecture (Face to face lecture): 100 minutes x 14 weeks per
hours	semester
	Practicum (field practice): 3 hours x 14 weeks per semester
Workload	Class (lecture, assignment, independent learning) : 5.3 hours
	x 14 week per semester = 74.7 hours
	Practicum : 3 hours x 14 weeks = 42 hours
	Mid Exam : 2 hours
	Final exam : 2 hours
	Total : 120.7 hours/semester
Credit points	3 (2-3) SCH = 4 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	None
Module objectives/intended	After completing this course, students will have a good
learning outcome	understanding on climate components, factors controlling
	climate, process of climate formation, climate variations and
	its applications
Content	This course provides understanding of climate components,
Content	factors controlling climate, process of climate formation,
	climate variations in the world and its application.
Study and examination	<i>Cognitive:</i> Midterm exam, Final exam, Quizzes,
requirement and forms of	Assignments
examination	Psychomotor: Practice
examination	Affective: Assessed from the element /variables
	achievement, namely (a) Contributions (attendance,
	active, role, initiative, language), (b) Being on time, (c)
	Effort.
Media employed	Classical teaching tools with white board and power point
	presentation

Workload	Class (lecture, assignment, independent learning) : 5.3 hours
	x 14 week per semester = 74.7 hours
	Practicum : 3 hours x 14 weeks = 42 hours
	Mid Exam : 2 hours
	Final exam : 2 hours
	Total : 120.7 hours/semester
Credit points	3 (2-3) SCH = 4 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	None
Module objectives/intended	After completing this course, students can explain the
learning outcome	functions and basic physiological processes in plants such as
	water transportation, respiration in plants, photosynthesis,
	essential nutrients, transport and assimilation of mineral
	nutrients, some fundamental processes of growth and
	development, photophysiology, basic mechanisms of
	response plants against environmental stress and the
Contont	molecular basis of some plant physiology processes.
Content	Basic Plant Physiology Course for bachelor degree contains
	the basic physiology of the processes and functions that take
	place in higher plants such as transpiration and soil-plant-air
	relations, respiration, photosynthesis, nutrients and
	assimilation, hormones in relation to plant growth and
	development , the mechanism of plant response to
	environmental stress, and the molecular basis of several
	cases of physiological processes in plants.
Study and examination	<i>Cognitive:</i> Midterm exam, Final exam, Quizzes,
requirement and forms of	Assignments

Lecturer	Team Teaching from AGH Department (YWE, PUR, MSY,
	WBS)
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in
	Agronomy and Horticulture
Type of teaching, contact	Lecture (Face to face lecture): 100 minutes x 14 weeks per
hours	semester
	Practicum (in class practice) : 2 hours x 14 weeks per
	semester
Workload	Class : 2 hours x 14 week per semester = 28 hours
	Practical : 2 hours x 14 weeks per semester = 42 hours
	Mid Exam : 2 hours
	Final exam : 2 hours
	Total : 74 hours/semester
Credit points	3 (2-2) SCH = 3.6 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	STK211
Module objectives/intended	After completing this course students will be able to explain
learning outcome	the basic principles of experimental design, one and two
learning outcome	factor experiments, comparison of treatment values,
	sampling and analysis of survey data, combined analysis
	between experiments, as well as covariance analysis and
	augmented design. Student will also be able to do data
	analysis according to the design, both manually and using
Contont	software This courses explain the basis principles of experimental
Content	This courses explain the basic principles of experimental
	design, single factor experiment (RCD, Randomized
	complete block design, latin square), comparison among
	treatment means (factorial, split plot and split blocks), and
	comparison of treatment mean value (LSD, HSD, DMRT, t-
	Dunnet, orthogonal contrast). Also explain topics to meet the
	needs of achieving the major competencies in AGH, namely
	sampling and analysis of survey data, combined analysis
	between experiments, as well as, covariance analysis and
	Loursenanted design
	augmented design
Study and examination	Cognitive: Midterm exam, Final exam, Quizzes,
Study and examination requirement and forms of examination

Semester(s) in which the	3 rd or 5 th Semester
module is taught	
Person responsible for the module	Dr Ir Bambang Sulistyantara, MS
Lecturer	Team Teaching from Landscape Architechture Department
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in Agronomy and Horticulture
Type of teaching, contact	Lecture (Face to face lecture): 100 minutes x 14 weeks per
hours	semester
	Practicum (field practice): 3 hours x 14 weeks per semester
Workload	Class (lecture, assignment, independent learning) :5.3 hours
	x 14 week per semester = 74.7 hours
	Practical : 3 hours x 14 weeks per semester = 42 hours
	Mid Exam : 2 hours
	Final exam : 2 hours
	Total : 120.7 hours/semester
Credit points	3 (2-3) SCH = 4 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	None
Module objectives/intended	After completing this course, the students is able to describe
learning outcome	the landscape as the background and the basis for a wide
	range of human activities, is able to explain the contraints in
	planning process, is able to creatively demonstrate the
	relation of climate to the design, selection and site analysis,
	and able to synergize aspects of spatial, social and visual
	which is required in understanding tha dynamics of the
Contont	landscape.
Content	This course introduces and explins the scope of landscape
	architecture and lansdcape history in Indonesia and the
	world, explain the process of planning, design and landscape
	management, review the constraints of planning; introduces
	the climate and its implications to the design; discusses site selection and analysis; discusses space considerations
	(exterior space), the organization of site structure, dwelling
	and human communities from the city scale, region scale up
	to attain a comfortable life environment

Study and examination requirement and forms of examination	Cognitive: Midterm exam, Final exam, Quizzes, Assignments Psychomotor: Practice Affective: Assessed from the element /variables achievement, namely (a) Contributions (attendance, active, role, initiative, language), (b) Being on time, (c) Effort.

Code	FPA400
Subtitle	
Courses	FPA 400 Community Service Project
Semester(s) in which the	6 th Semester
module is taught	
Person responsible for the	Dr Ir Nurhayati , MSi
module	
Lecturer	Team Teaching from Faculty of Agriculture
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in
	Agronomy and Horticulture
Type of teaching, contact	2 months including debriefing and Community service
hours	
Workload	$60 \ge 3 \text{ hours/day} = 180 \text{ hours}$
Credit points	3 SCH = 4 ECTS
Requirement according to	1. registered as a student of KKN-P IPB in Dit AP IPB
the examination regulation	2. Following lectures and practicing briefing (100%)
	KKN-P.
	3. Take the debriefing exam.
	4. Students who lack attendance in attending lectures and
	briefing practice (item 2), is not allowed to follow
	debriefing exams, and debriefing courses were given zero marks.
	5. Carry out activities in the field / work area. College student
	required to live on site (mondok) during the KKNP
	implementation time, including Saturdays and Sundays;
	6. Draft KKN-P reports per work area and submit to the IPB
	KKN-P Implementing Committee at the Faculty two weeks
	after completion of KKN-P.
	7. Take the exam conducted by DPL two weeks after
	draft report submitted.
	8. Submit the final KKN-P report that has been signed by
	DPL and approved by the Head of LPPM IPB no later than
	two week after the KKN-P exam to the KKN-P Secretariat at
	LPPM 1 copy and 1 CD softcopy of the report and to The
	Secretariat of the Faculty KKN-P Committee is 6 copies.
Recommended prerequisites	$IPK \ge 2.00$
	105 SCH
Module objectives/intended	1. Develop students' knowledge, attitudes, and skills in
learning outcome	identifying, planning, implementing and evaluating
	community empowerment programs in the agriculture field
	agriculture and in an integrated environment
	(multi and inter-disciplinary between professions in IPB),
	2. Increase awareness and commitment, and prepare

	students to skilled in communicating and collaborating among profession in overcoming problems in society,3. Preparing students to be able to develop networks cooperation in problem solving efforts to fulfill needs in the dynamics of actual life in society.
Content	This course provide learning experience for student to apply their knowledge and skills for community service project
Study and examination requirement and forms of examination	 Debriefing (attendace, active, effort, exam) Field (supervisors and village head) Reports and Exams Assessed from the element /variables achievement, namely (a) Contributions (attendance, active, role, initiative, language), (b) Being on time, (c) Effort.
Media employed	Students (5-7) from various fields of expertise are placed in one village to implement the KKN-P program in synergy with the development program that is being and will be implemented by the local government.
Reading list	IPB University Guide book of Community Service Project

Courses, if applicable	AGH250 Introduction to Seed Science and Technology
Semester(s) in which the module is taught	3 rd Semester
Person responsible for the module	Dr. Ir. Eny Widajati, MS
Lecturer	EWI, ERP,ASE, MRS, SIL, AQA, OSI, TKS, CBU, MSA, AZA, MSU,
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in Agronomy and Horticulture
Type of teaching, contact hours	Lecture (Face to face lecture): 100 minutes x 14 weeks per semester Practicum (field practice): 3 hours x 14 weeks per semester
Workload	Class (lecture, assignment, independent :5.3 hours x 14 weeks = 74.7 hours Practicum : 3 hours x 14 weeks = 42 hours Exam: 2 hours x 2 time = 4 hours Total = 120.7 hours
Credit points	3 (2-3) SCH = 4 ECTS
Requirement according to the examination regulation	 Registered in this course Minimum 80% attendance in this course
Recommended prerequisites	-
Module objectives/intended learning outcome	After completing this course the students will gain knowledge of the importance of quality seed and seedling in agricultural production, seed formation and development, seed viability and vigor, as well as skill on seed viability and seed health testing, seed production and certification, seed processing, handling and storage; and an overview of seed program in Indonesia
Content	The course discusses the importance of quality seeds in crop production, seed formation and development, metabolism during seed germination, and seed dormancy, definition of seed viability and seed quality testing, procurement and monitoring of quality seeds that include production and certification, processing and storage), seed pest and diseases, and development of seed industry in Indonesia.
Study and examination	Cognitive: Mid term exam, Final exam, Quizzes,
requirement and forms of	Assignments, practicum report
examination	Psychomotor: Practice
	Affective: Assessed from the element /variables
	achievement, namely (a) Contributions (attendance,
	active, role, initiative, language), (b) Being on time, (c) Effort.

Module objectives/intended	
learning outcome	The students are expected to be able to explain the characteristics of horticultural crops and the technology of production
Content	The course discusses the basic understanding and the scope of horticulture, horticultural crop characteristics and cultivation, horticultural crop production systems in Indonesia, the development of world and Indonesian horticulture and factors affecting them, as well as horticultural production technologies which include greenhouses, media and pots, hydroponics production, organic farming, selecting quality seeds, land preparation and planting, fertilizing, irrigation and fertigation, pruning, flowering and flower management and fruit management, harvesting and post-harvesting, and yard intensification. The students will learn the technical and practical aspects of horticulture in the intensive cultivation of horticultural crops during the practical. The prerequisite of the course is the Fundamentals of Agronomy.

AGH301 Field Trip

AGIISUI FIEIU IIIP	
Module Name	Field Trip
Module level	AGH SP Spesific Course
Code	AGH301
Subtitle	-
Courses	AGH301 Field Trip
Semester(s) in which the	4th Semester
module is taught	
Person responsible for the	Dr.Ir. Supijatno, MSi (SPJ)
module	
Lecturer	SUP, APL, EWI, PUR, MSR, ASE, DEF, DSU, WDW, SZA,
	DGU, JGK, EPR, SUG, AKU
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in
	Agronomy and Horticulture
Type of teaching, contact	Conduct field visits supervised by lecturers
hours	
Workload	5 days x 8 hours = 40 hours
Credit points	1 (0-3) sks
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	-
Module objectives/intended	After completing this course, the students will have insight
learning outcome	and have the ability to explain the basic principles of
	managing agricultural crops in a holistic way
Content	This course provides students with the insights and
	understanding of the holistic aspects of agronomy,
	particularly regarding the management of crop production in
	the fields at an economical scale, and/or at research and
	development institutions. Implementation of the activities is
	field visits, preparing reports and evaluation of student
	reports. The site visits have been planned to vary from
	commercial companies, successful growers, and
	research/development institutions specialized in food crops,
	horticulture, plantations and seeds/young plant production.
Study and examination	Cognitive: Individual Report
requirement and forms of	Affective: Assessed from the element /variables
examination	achievement, namely (a) Contributions (attendance,
	active, role, initiative, language), (b) Being on time, (c)
	Effort.

Semester(s) in which the	5th Semester
module is taught	
Person responsible for the	Dr. Ni Made Armini Wiendi, MS (NMA)
module	
Lecturer	NMA, DSU, APU, SWA, AMA, DEF, BSP, DDI, SUA,
	NKH, MSR, SAM, NAM
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in
	Agronomy and Horticulture
Type of teaching, contact	Lecture (Face to face lecture): 100 minutes x 14 weeks per
hours	semester
	Practicum (field practice): 3 hours x 14 weeks per semester
Workload	Class (lecture, assignment, independent :5.3 hours x 14
	weeks $=$ 74.7 hours
	Practicum : 3 hours x 14 weeks = 42 hours
	Exam: 2 hours x 2 time = 4 hours
	Total = 120.7 hours
Credit points	3 (2-3) SCH = ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	-
Module objectives/intended	After completing this subject, the students will have the
learning outcome	ability to explain the concept and provide examples of plant
	biotechnology and have skills of biotechnology technique.
	Additionally, they are able to choose a specific technique in
	biotechnology to be applied for crops, plantation and
	horticultural crops.
Content	This course gives students knowledge about the meaning and
	scope of plant biotechnology and its application in
	agriculture. Topics include understanding of plant
	biotechnology, plant tissue culture, cell and tissue biological
	processes including organogenesis and embryogenesis in
	seed production in vitro, interactions between growth
	regulators with plant tissues, genes and DNA, induction of
	genetic diversity for in vitro breeding through somaclonal
	variations, culture protoplast, and gene transformation and its
	expression, secondary metabolite production in vitro,
	synthetic seed production, in vitro flowering, germplasm
	preservation, application of biotechnology in food crops,
	horticulture and plantations. Practicum: Students are
	expected to gain experience in applying simple techniques in
	plant biotechnology through individual works during the
	practicum sessions to allow a better understanding of the

Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	AGH200
Module objectives/intended learning outcome	After completing this course, the student can identify the factors of food crop production and identify problems of crop production scientifically, and can apply the technology for production of important carbohydrates and proteins crops. The students are expected to able to manage food crop production businesses to produce maximum yield in sustainable agricultural systems
Content	The Food Crop Science course presents lecture material and practicum covering important cereals, nuts and tuberous crops that produce carbohydrates and proteins. The discussion includes their roles and functions, prospects and development in Indonesia, origin, and adaptation, botany, morphology and physiology, environment and growth requirements, crop production systems and cultivation techniques. The course materials need to be understood and mastered by students at the end of the course. Evaluation is conducted through group discussions, structured assignments, multiple-choice tests, and essays. Practicum is directed to add insights, increase the knowledge and skills of students about the subjects. Practicum material covers the cultivation of lowland rice and primary post-harvest

	handling, dryland rice cultivation, legumes and tubers, and
	intercropping.
Study and examination	Cognitive: Mid term exam, Final exam, Quizzes,
requirement and forms of	Assignments, practicum report

Person responsible for the	Dr. Ir. Herdhata Agusta (HAG)
module	
Lecturer	WDW, AJU, MGH, PUR, SUW, SUP, HAR, ASE, MHB,
	AQA, SUD, SZA, MSU, DDM, HAG, ESA, SUG, SOB,
	SAM, AWR, AZA
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in
	Agronomy and Horticulture
Type of teaching, contact	Lecture (Face to face lecture): 100 minutes x 14 weeks per
hours	semester
nouis	Practicum (field practice): 3 hours x 14 weeks per semester
Workload	Class (lecture, assignment, independent :2.7 hours x 14
W OFRIGUE	weeks = 37.8 hours
	Practicum : 2 hours x 14 weeks = 28 hours
	Exam: 2 hours x 2 time = 4 hours
	Total = 69.8 hours
Credit points	2(1-2) SCH = 2.3 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	-
Module objectives/intended	The students are be able to and trained to: (1) explain the
learning outcome	principles and holistic integrated farming systems,
learning outcome	integration systems and justify the level of cohesiveness, (2)
	explain the flow system (cycle) and nutrients, air, energy and
	agricultural products balance including of the principles "
	Life Cycle Assessment "and footprints: air, energy, carbon
	and Nitrogen, both in agroforestry, agropastoral and
	agrofisheries systems and their combinations, (3) plan,
	design and evaluate integrated farming systems and arrange
	the dynamic models of integrated farming systems that the
	whole plant based towards sustainable agriculture systems.
Content	This course discusses the definition and scope of integrated
	agriculture; the types and characteristics of integrated
	agriculture versus monoculture agriculture, the principle of
	integration in agricultural production (agroforestry, agro
	pasture, agro fisheries), silviculture, ecological engineering
	in integrated farming development, concepts of integrated
	agricultural, principles in integrated agriculture, optimation
	of integrated company ture normative stand in integrated
	of integrated agriculture, normative steps in integrated
	of integrated agriculture, normative steps in integrated farming; study cases and financial feasibility of integrated farming in wetlands and drylands, the direction of integrated

	agriculture research, energy, water, carbon and nitrogen
	footprint.

Module level	AGH SP Spesific Course
Code	AGH322
Subtitle	-
Courses	AGH322 Water and Nutrition Management
Semester(s) in which the	6 rd Semester
module is taught	
Person responsible for the	Dr. Ir. Eko Sulistyono, MSi (ESU)
module	
Lecturer	ESU, DSO, ESA, SSU, SWA,SUD, AKU, HAG, JGK
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in
	Agronomy and Horticulture
Type of teaching, contact	Lecture (Face to face lecture): 100 minutes x 14 weeks per
hours	semester
	Practicum (field practice): 3 hours x 14 weeks per semester
Workload	Class (lecture, assignment, independent :5.3 hours x 14
	weeks = 74.7 hours
	Practicum : 3 hours x 14 weeks = 42 hours
	Exam: 2 hours x 2 time = 4 hours
	Total = 120.7 hours
Credit points	3 (2-3) SCH = 4 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	AGH200
	AGH240
Module objectives/intended	1. Have skills to identify and calculate the availability of
learning outcome	water and nutrient sources for crops in the field
	2. Have the ability to calculate the water requirements and
	nutrients
	3. Have the ability to analyze the physiological,
	morphological and anatomical responses of crops to water
	and plant nutrients, and
	4. Have skills to solve the lack or excess of water and
	nutrients to manage water and nutrients based on the
	requirements of the crops through various methods of
	irrigation, drainage and fertilization
Content	The Plant Water and Nutrition Management course
	discusses the development of water and nutrient resources,
	crop water requirements, plant response to water, irrigation
	and drainage systems, nutrient uptake by roots and
	fertilization through leaves, distant and close transport,
	Rhizosphere, nutrient solutions, root structures and root
	development, nitrogen fixation, macro and micronutrient
	functions, symptoms of deficiency and toxicity, as well as
	factors that affect nutrient availability, nutrient balance and
	water use efficiency, relations of water, nutrients and crop
	yield.

Credit points	3 (2-1) sks
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	AGH200
	AGH240
Module objectives/intended	After completing this course, the students can explain the
learning outcome	biological and physiological aspects of conventional plant
	culture and tissue culture, the reasons and objectives of each
	method including their advantages and disadvantages, and
	have the ability to design a tissue culture laboratory and to do
	tissue culture techniques of certain species
Content	This lecture discusses general concepts about vegetative and
	generative plant propagation. Vegetative propagation topics
	cover both conventional and tissue culture propagation
	techniques along with the biological and physiological
	aspects underlying them, objectives, applications, including
	advantages and disadvantages of each technic. The
	discussion topics are emphasized on conventional vegetative
	propagation technics (cuttings, grafting, budding, and
	attachment), propagation of specific plant organs, apomictic
	and tissue culture techniques (organogenesis,
	embryogenesis), laboratory facilities, aseptic techniques,
	tissue culture media and tissue substances growth regulators,
	factors affecting organogenesis and embryogenesis, and the
	production of quality plant material (free of disease).
	Generative propagation discusses pollination, seed

	formation, seed development, certified seed production,
	processing and storage of seeds.

Credit points	2 (1-2) SCH = 2.3 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	STK 222
Module objectives/intended	After completing this subject, the student will have the
learning outcome	competence to prepare research proposals, plan a research,
	submit research results in writing in the form of a thesis,
	prepare and present scientific papers for seminar and
	publication
Content	This course is a general service for the students before they
	start their final project in research or internship under the
	guidance of a supervisor. The course covers the basics and
	techniques of scientific writing, library research, preparation
	of research proposals/internships, and preparation for the
	presentation of research results. Practicum: This course
	provided students with the opportunity to practice the
	technics of scientific writing, so at the end of the course the
	students can produce scientific reports.

Module objectives/intended	After completing this course, the student will be able to explain post-harvest handling techniques of agricultural
learning outcome	
Contont	crops This source discusses the basics of post hervest egricultural
Content	This course discusses the basics of post-harvest agricultural produce and techniques for handling post-harvest produces. The basics of postharvest agricultural products include the definition and scope of postharvest agricultural products that include cleaning, sorting and grading, drying, grinding (size reduction), quality management, packing, and storage. Post-harvest handling techniques of specific products include the physicochemical nature of materials and commodity-specific post-harvest handling techniques (food, horticulture, and plantations). Practicum activities give the students the opportunity to expand the views on postharvest handling and to improve skills in postharvest handling techniques for selected crops, especially in determining the maturity, sorting, drying, grinding and final yield, as well as analyzing/determining the quality of the produce.
Study and examination requirement and forms of examination	<i>Cognitive:</i> Mid term exam, Final exam, Quizzes, Assignments, practicum report, presentation <i>Psychomotor:</i> Practice <i>Affective:</i> Assessed from the element /variables achievement, namely (a) Contributions (attendance,

Credit points	3 (2-3) SCH= 4 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	AGH240
Module objectives/intended	By the end of the course the student have the ability to
learning outcome	manage a vegetable production business to produce
	maximum yield with high quality in a sustainable agriculture system.
	The students understand the methods to identify the
	characteristics of vegetable crops, their genetic potentials and
	utilization The student understand the science and technology of
	The student understand the science and technology of primary crop production and post-harvest vegetables
Content	The student can evaluate the process of vegetable production
Content	This course discusses comprehensively the main vegetable
	commodities and exotic vegetables that are cultivated in
	Indonesia and in the world. The course covers aspects of crop
	production technology (nurseries, planting systems,
	fertilization, irrigation, weed control, pest and disease
	control, harvesting), physiology, ecology, botany, seedling
	and breeding, post-harvest, and marketing. In the practicum,
	the students are provided with the opportunity to do up
	planning and analysis of a vegetable production system, and
Chudry and second	to practice the technics of growing vegetable crops.

AGH343 Floriculture

AGII545 FIOTICUITU	
Module Name	Floriculture
Module level	AGH Spesific Course, Elective Course
Code	AGH343
Subtitle	-
Courses	AGH343 Floriculture
Semester(s) in which the	6 rd Semester
module is taught	
Person responsible for the	Dr Ir Ketty Suketi, MS (KSU)
module	
Lecturer	KSU, DSU, JGK, SIA, KRI
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in
	Agronomy and Horticulture
Type of teaching, contact	Lecture (Face to face lecture): 100 minutes x 14 weeks per
hours	semester
	Practicum (field practice): 3 hours x 14 weeks per semester
Workload	Class (lecture, assignment, independent :5.3 hours x 14
	weeks = 74.7 hours
	Practicum : 3 hours x 14 weeks = 42 hours
	Exam: 2 hours x 2 time = 4 hours
	Total = 120.7 hours
Credit points	3 (2-3) SCH = 4 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	AGH240
Module objectives/intended	After completing this course, the student can explain the
learning outcome	definition and scope of horticulture, botany, growing
	requirements, types, and techniques of cultivation of
	ornamental plants and important flowers and physiology /
	post-harvest handling and management of flower and
	ornamental plant business
Content	This lecture discusses aspects in the cultivation of flowers
	and ornamental plants comprehensively, including botany,
	physiology, ecology, breeding, the supply of plant/seed
	material, planting, fertilizing, irrigation, special treatment for
	flowering or maintaining vegetative growth, pest and disease
	control, harvesting, post-harvest treatment, and marketing.
	The course focuses on economically important ornamental
	species including orchids, chrysanthemums, carnation, lily,
	gerbera, heliconia, bedding plants, indoor and landscape
	plants, and aromatic ornamentals. This course also includes
	the management of flower and ornamental business. Practical
	is directed at expanding students vies and improving student
	skills in important aspects of ornamental plants and flower
	production.
Study and examination	<i>Cognitive:</i> Mid term exam, Final exam, Quizzes,
requirement and forms of	Assignments, practicum report, presentation
examination	Psychomotor: Practice

	<i>Affective:</i> Assessed from the element /variables achievement, namely (a) Contributions (attendance, active, role, initiative, language), (b) Being on time, (c) Effort.
Media employed	Classical teaching tools with white board and power point presentation

AGH442 Pomology

Module Name	Pomology
Module level	AGH Spesific Course, Elective Course
Code	AGH442
Subtitle	
Courses	AGH442 Pomology
Semester(s) in which the	7 th Semester
module is taught	/ Sellester
Person responsible for the module	Ir. Winarso D. Widodo, MS.PhD. (WDW)
Lecturer	WDW, DDM, KSU, AKU,RPO, AKU
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in Agronomy and Horticulture
Type of teaching, contact hours	Lecture (Face to face lecture): 100 minutes x 14 weeks per semester Practicum (field practice): 3 hours x 14 weeks per semester
Workload	Class (lecture, assignment, independent :5.3 hours x 14 weeks = 74.7 hours
	Practicum : 3 hours x 14 weeks = 42 hours Exam: 2 hours x 2 time = 4 hours Total = 120.7 hours
Credit points	3 (2-3) SCG = 4 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	AGH240
Module objectives/intended	1. Fruit Biology Competence: being able to explain the
learning outcome	 ecology of tropical fruit plants, physiology of plant growth, the process of flowering and fruiting, fruit growth and development, postharvest physiology. 2. Orchard Management Competence: being able to explain the principles of orchard management starting from the selection of the location of the garden, nursery, plant cultivation till harvest and post-harvest handling. 3. Competence of Agribusiness / Tropical Fruit Farming: being able to explain the agribusiness system of important tropical fruits in Indonesia and its role in national and international trade, growth requirements, botany, growth management. 4. Practical Skills: being able to plant and maintain selected fruit crops and apply the management of tropical fruit with vegetable crops and potted fruit trees.
Content	The AGH442 course is a continuation of the Horticulture Fundamentals course (AGH242) which aims to explore the science of fruit plants (Pomology). Students who have passed Plant Cultivation Engineering (AGH 241) and Plant Breeding (AGH331) will be benefited to take this course. This course

	teaches the environment for growing tropical fruits, the
	process of flowering and fruit formation, growth and
	development of tropical fruit trees, fruit growth and
	development, fruit harvest and post-harvest, and agribusiness
	of several important fruit types in Indonesia. In addition to
	lectures in class, students will conduct fieldwork to study the
	morphology and anatomy of several tropical fruit species and
	the practice of cultivating some fruit crops.
Study and examination	Cognitive: Mid term exam, Final exam, Quizzes,
requirement and forms of	Assignments, practicum report
examination	Psychomotor: Practice
	Affective: Assessed from the element /variables
	achievement, namely (a) Contributions (attendance,
	active, role, initiative, language), (b) Being on time, (c)
	Effort (d) Team work
Media employed	Classical teaching tools with white board and power point

Courses	AGH443 Medicinal, Beverage, and Aromatic Crops
Semester(s) in which the module is taught	7th Semester
Person responsible for the module	Dr Ir Ani Kurniawati, MSi (AKU)
Lecturer	AKU, AWA
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in Agronomy and Horticulture
Type of teaching, contact hours	Lecture (Face to face lecture): 100 minutes x 14 weeks per semester Practicum (field practice): 3 hours x 14 weeks per semester
Workload	Class (lecture, assignment, independent :5.3 hours x 14 weeks = 74.7 hours Practicum : 3 hours x 14 weeks = 42 hours Exam: 2 hours x 2 time = 4 hours Total = 120.7 hours
Credit points	3 (2-3) SCH = 4 ECTS
Requirement according to	1. Registered in this course
the examination regulation	2. Minimum 80% attendance in this course
Recommended prerequisites	-
Module objectives/intended learning outcome	After completing this course, the student can plan the production system of beverage, medicinal and aromatic medicinal crops and manage their post-harvest handling
Content	This course teaches students the scope and significance of beverage, medicinal and aromatic crops with a focus on phytochemical content and uses, an overview of beverage, medicinal and aromatic crops from the aspects of botany, ecology, and agronomy; cultivation and handling of post- harvest beverage, medicinal and aromatic crops.
Study and examination requirement and forms of examination	<i>Cognitive:</i> Mid term exam, Final exam, Quizzes, Assignments, practicum report, presentation <i>Psychomotor:</i> Practice <i>Affective:</i> Assessed from the element /variables achievement, namely (a) Contributions (attendance, active, role, initiative, language), (b) Being on time, (c) Effort (d) Team work
Media employed	Classical teaching tools with white board and power point presentation

AGH498 Seminar

Module Name	Seminar
Module level	Final Project Course
Code	AGH498
Subtitle	-
Courses	AGH498 Seminar
Semester(s) in which the	8th Semester
module is taught	
Person responsible	Dr Ir Ni Made Armini Wiendi, MS (NMA)
Lecturer	NMA, JGK,
Language	Indonesian
Relation to curriculum	Compulsory Courses for undergraduate program in
	Agronomy and Horticulture
Type of teaching, contact	Final project presentation and discussion
hours	
Workload	Final project presentation 45 minutes
	Attendance 25 times
Credit points	1 SCH = 1.3 ECTS
Requirement according to	1. Registered in this course
the examination regulation	
Recommended prerequisites	-
Module objectives/intended	Students are able to arrange and submit the results of their
learning outcome	final assignment studies in scientific forums
Content	-
Study and examination	Assessment includes: the ability to deliver seminar papers,
requirement and forms of	the ability to answer and the accuracy of answers, language
examination	and attitude, paper format, timeliness
Media employed	Power point presentation
Reading list	Panduan Penyelesaian Tugas Akhir (Guide book for Final
	Project)

AGH499 Final Project

Module Name	Final Project	
Module level	Final Project Course	
Code	AGH499	
Subtitle	-	
Courses	AGH499 Final Project	
Semester(s) in which the	8th Semester	
module is taught		
Person responsible	Prof. Dr. Ir Sandra Azis, MS (SAA)	
Final Project Team	SAA, AWA, KSU, DDI	
Language	Indonesian	
Relation to curriculum	Compulsory Courses for undergraduate program in	
	Agronomy and Horticulture	
Type of final project	Research or Internship	
Workload	4 months	
Credit points	6 SCH = 7.6 ECTS	
Requirement according to	Have passed all other courses aside AGH 498 and AGH499	
the examination regulation		
Recommended prerequisites	1. Registered in this course	
	2. GPA \ge 2.00	
	3. Pass STK 222 with grade minimum D	
	4. Pass AGH 398 with grade minimum C	
Module objectives/intended	Students able to compile a scientific description of the results	
learning outcome	of the study in the form of a bachelor thesis or final project	
	report	
Content	-	
Study and examination		
requirement and forms of	the ability to answer and the accuracy of answers, language	
examination	and attitude, paper format, timeliness	
Media employed		
Reading list	Panduan Penyelesaian Tugas Akhir (Guide book for Final	
	Project)
